Time Allowed: 1 hour   **August 2019**

Q1 Write a program to compute the postage for an airmail letter according to the following table:

Country Category	Postage Rates (LKR)							
	A	**B**	**C**	**D**	**E**	**F**	**G**	**H**
First 20g	55.00	60.00	65.00	70.00	75.00	80.00	85.00	110.00
Every additional 10g	15.00	15.00	20.00	20.00	25.00	25.00	30.00	40.00

The user will select the country category and input the weight to the nearest gram. The programme should then calculate the postage and display the letter weight, destination country category and the postage in LKR. For letters weighing 100g or more a message should be displayed asking if the sender would prefer to send it as a small packet.
